

Waste and Recycling

The amount that has been recycled year to date is lower than last year (1177 kg in 2014 compared to 444 kg 2014).

This does not mean that we are recycling less. This is due to the decrease in staff in the second part of last year. We now have just under half the amount of staff so our waste has reduced significantly.

Paper usage

Our usage of paper has decreased this year, with orders being on average 6.25 reams per third month compared to 15.92 averaged reams per month last year. This is a decrease of 255%.

Electricity

Monthly electricity consumption has remained mostly consistent across the year. Overall the usage has decreased on average by 2%.

This also means that our CO2 emissions have also decreased.

It is vitally important that monitors, screens, fans and air conditioners are turned off when not in use.
